

This is a hello world demonstration, done using netbeans IDE, with HTML and CSS. The purpose of this assignment was to be introduced to the HTML and CSS languages, which are used to create

```
<html>
<head>
  <link rel="stylesheet" type="text/css" href="Style.css">;
  <meta charset="UTF-8">
  <title>Hello World Demo</title>
</head>
<body>
  <center>Hello World!</center>
</body>
</html>
```

webpages
and web
content.

For this assignment, I made an HTML file for the actual content that goes on the webpage (ie. "Hello World") and I created an external stylesheet by linking a CSS document to style the webpage. I gave the page a title, as you can see in my code, with the <title> tag. I also centered the text on the webpage.

I used the style sheet to change the background color of this webpage to bisque, using the background-color attribute.

```
body {
  background-color: bisque;
}
```
