

Play With CSS

The purpose of this assignment was to gain a better knowledge of CSS, the main instructions were to build a web page that was impressive.

In my web page, I added a header photo, and a navigation bar as well as a container for content. I made other pages to have the links go to, they all use the same CSS, so they basically all look the same, but I didn't add any content for the pages, seeing as how this assignment was more for the design. My goal was to make it look like a webpage that a company might use, with a space theme and "About Us" and "News" pages.

```
li{  
    float: left;  
}  
li a{  
    display: block;  
    text-align: center;  
    padding: 14px 16px;  
    text-decoration: none;  
}
```

I think that this assignment was helpful, I really like creating navigation bars and it gave me the chance to align one horizontally across the middle of the page, which is not something I have ever done before. I would have liked to have more time to complete the assignment, but with the time given and effort put in, I think it was, overall, a good exercise.

```
  
  
    <ul>  
        <li> <a  
href="index.php">Home </a> </li>  
        <li> <a  
href="about.html">About Us </a>  
</li>  
        <li> <a  
href="staff.html">Staff</a></li>  
        <li> <a  
href="news.html">News</a> </li>  
  
    </ul>
```
